

- 1 Slightly loosen screws on hinge.

- 2 Adjust back door in slots of hinges in such a manner that the outer skin of the roof and the upper of the door are in alignment and that the back door is max. 1 mm deeper, respectively.

- 3 Tighten screws on hinge.

- 4 Slightly loosen screws on stop of rear pillar.

5 Slightly loosen screws on strap for back door lock.

6 Close back door and check whether door is in alignment with rear pillar or is seated max. 1 mm deeper. If required, close back door slightly more energetically for adaptation or pull toward the rear.

7 Tighten screws on stop of rear pillar and on strap for back door lock.

8 If back door binds in lock, adjust by removing or inserting a spacing washer at lock strap to adjust distance in relation to lock.

9 Adjust lateral distance of back door by adding shims to stop on back door (left or right).
